5G Network Slicing Environment Using MATLAB

Aim : To analyze the performance of a 5G Network Slicing environment by studying the number of network slices, slice utilization, and end-to-end latency using MATLAB.

Objective – 1

Analyze the Number of Network Slices

Generate and visualize multiple network slices using MATLAB. Observe how a 5G network can

be logically partitioned into independent slices for different communication services.

MATLAB Code:

```
clc;
clear;
close all;
slices = {'eMBB','URLLC','mMTC','Private','IoT'};
count = [1 1 1 1 1]; % One instance of each network slice
figure
bar(count)
grid on
set(gca,'XTickLabel',slices)
xlabel('Network Slice Type')
ylabel('Number of Network Slices')
```

title('Number of Configured 5G Network Slices')

Expected Output

- Bar graph showing the number of configured network slices.

Objective – 2

Compare Slice Utilization (%)

Analyze the utilization percentage of different network slices using MATLAB.

Compare the

resource usage of each slice to evaluate network efficiency.

MATLAB Code

```
clc;
```

```
clear;
```

```
close all;
```

```
slices = categorical({'eMBB','URLLC','mMTC','Private','IoT'});  
utilization = [85 70 60 75 50];  
  
figure;  
bar(slices, utilization);  
  
grid on;  
  
xlabel('Network Slice Type');  
ylabel('Slice Utilization (%)');  
title('Slice Utilization in 5G Network Slicing');  
ylim([0 100]);
```

Expected Output

- Bar graph showing slice utilization (%).

Objective – 3

Analyze End-to-End Latency (ms)

Compare the end-to-end latency of different network slices using MATLAB.
Observe how

latency varies depending on the service requirements of each slice.

MATLAB Code:

```
clc;
clear;
close all;
slices = [1 2 3 4 5];
latency = [25 5 40 15 60];
figure;
plot(slices, latency, '-o','LineWidth',2,'MarkerSize',8);
grid on;
xticks(slices);
xticklabels({'eMBB','URLLC','mMTC','Private','IoT'});
xlabel('Network Slice Type');
ylabel('End-to-End Latency (ms)');
title('5G Network Slicing: End-to-End Latency');
ylim([0 70]);
```

Expected Output

- Line graph showing end-to-end latency for different network slices. Result

The MATLAB analysis successfully demonstrated the characteristics of a 5G Network Slicing environment. The results showed that multiple network slices can coexist while exhibiting different utilization levels and latency characteristics based on their intended services.
